

WHEEL BEARING GREASE

Spanjaard Wheel Bearing Grease is a premium, high-performance extreme pressure (EP) wheel bearing grease formulated with an advanced calcium sulfonate complex thickener and highly refined mineral base oils. The unique thickener provides inherent extreme pressure properties, exceptional water resistance, superior corrosion protection, and outstanding mechanical/thermal stability.

Spanjaard Wheel Bearing Grease excels in wheel bearing service, offering extended service life, reduced wear, and protection in wet, dusty, high-temperature, or heavily loaded conditions.

APPLICATIONS

- Automotive wheel bearings in passenger cars, light trucks, SUVs, trailers, and commercial vehicles.
- Heavy-duty truck, trailer, and fleet wheel bearings subjected to high loads, heat from braking, and road contaminants.
- Boat trailer wheel bearings (excellent water resistance for submersion and wet environments).

DIRECTIONS FOR USE

Thoroughly clean the hub, bearings, and spindle, then hand-pack each bearing by forcing grease through the rollers from the wide end until it oozes out the narrow end. Reassemble with a new grease seal, apply a light coat to the spindle and outside of the bearing, and torque the adjusting nut to manufacturer specifications while spinning the hub to set proper preload. Finally, fill any remaining hub cavity voids with grease, replace the dust cap, and check for smooth rotation before reinstalling the wheel.

TYPICAL PHYSICAL AND PERFORMANCE PROPERTIES

Features:	<ul style="list-style-type: none"> • Appearance: Beige/Brown paste • Thickener: Calcium Sulphonate • NLGI Grade: 2 • Worked Penetration 1/10mm: 265-295 • Base Oil Viscosity (40°C): 400 cSt • Timken OK Load (kg): >30 • Drop Point: >300°C • Operating Temperature: -20 to 180 °C
------------------	---

PACKAGING

100g Sachet

500g Jar

Revision: 160226

For safety and storage information, please refer to the safety data sheet (SDS).
